---

### **1. ProblemStatement**

This library management system aims to solve the basic challenge of tracking booksandborrowers.Manualtrackingofbookloansandreturnsistime-consuming and error-prone, so this system will help librarians keep accurate records of the library's collection and borrowing activities.

### **2. DatabaseDesign&Implementation**

#### **DatabaseCreation&Tables**

--Createdatabase

```
CREATEDATABASElibrary;
```

```
USE library;
```

-- Create Books table

```
CREATETABLEBooks(  
    book_idINTPRIMARYKEYAUTO_INCREMENT, title  
    VARCHAR(100) NOT NULL,  
    authorVARCHAR(50)NOTNULL,  
    statusENUM('Available','Borrowed')DEFAULT'Available'  
);
```

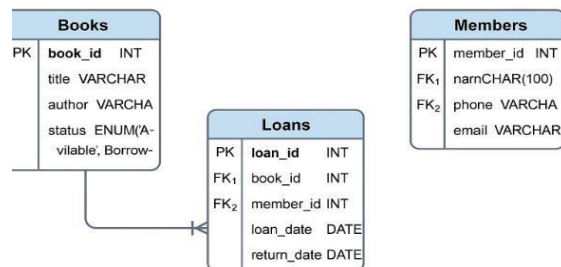

-- Create Members table

```
CREATETABLEMembers(  
    member_id INTPRIMARYKEYAUTO_INCREMENT,  
    name VARCHAR(100) NOT NULL,  
    phoneVARCHAR(20),  
    emailVARCHAR(100)  
);
```

-- Create Loans table

```
CREATETABLELoans(  
    loan_idINTPRIMARYKEYAUTO_INCREMENT,  
    book_id INT,  
    member_idINT,  
    loan_dateDATENOTNULL,  
    return_date DATE  
);
```

### ERDiagram(ReverseEngineered)

## 3. QueriesforDataManagement

### InsertSampleData

```
INSERT INTO Members (name, phone, email) VALUES  
( 'John Doe', '9876543210', 'john.doe@example.com'), ('Alice  
Smith', '8765432109', 'alice.smith@example.com'),  
( 'BobJohnson', '7654321098', 'bob.johnson@example.com'),  
( 'Emily Davis', '6543210987', 'emily.davis@example.com'),  
( 'MichaelBrown', '5432109876', 'michael.brown@example.com');
```

```
INSERTINTOLOans(book_id,member_id,loan_date,return_date)VALUES
```

```
(3,1,'2025-04-01',NULL),--Bookborrowed,notyetreturned (5, 2,  
'2025-03-28', '2025-04-03'),  
(1,3,'2025-03-30',NULL),--Bookborrowed,notyetreturned (4, 4,  
'2025-03-25', '2025-03-31');
```

### **RetrievalQueries**

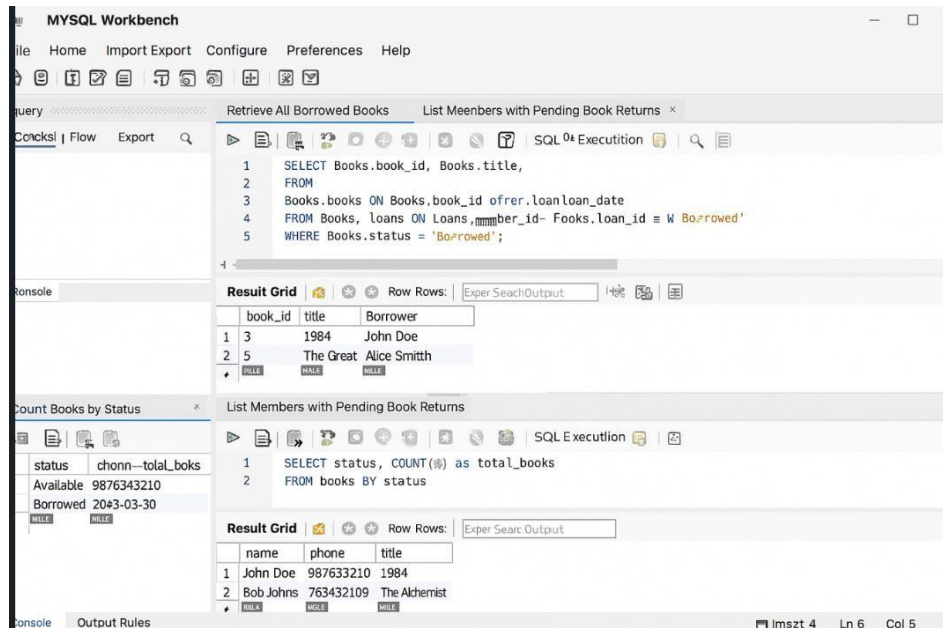

```
SELECTBooks.book_id,Books.title,Members.nameASBorrower, Loans.loan_dateb  
FROMBooks  
JOINLoansONBooks.book_id=Loans.book_id  
JOIN Members ON Loans.member_id = Members.member_id  
WHEREBooks.status='Borrowed';4.Implementation&Results
```

## Execution Environment

The Library Management System was implemented and executed in MySQL Workbench.

- Database Management System (DBMS): MySQL 8.0
- Execution Platform: MySQL Workbench 8.0
- Operating System: Windows 11
- Testing Data: Sample books, members, and loans were inserted to validate queries.
- Tools Used:
  - MySQL Workbench (for database creation, query execution, and ER diagram generation)

## Screenshots of Execution Results

The screenshot displays the MySQL Workbench interface with two queries executed. The first query, titled 'Retrieve All Borrowed Books', lists books and their borrowers. The second query, titled 'List Members with Pending Book Returns', lists members and their pending returns.

**Query 1: Retrieve All Borrowed Books**

```
1 SELECT Books.book_id, Books.title,
2 FROM
3 Books.books ON Books.book_id = loans.loan_date
4 FROM Books, loans ON Loans.member_id = Books.loan_id = W Borrowed'
5 WHERE Books.status = 'Borrowed';
```

**Result Grid 1:**

book_id	title	Borrower
3	1984	John Doe
5	The Great	Alice Smith

**Query 2: List Members with Pending Book Returns**

```
1 SELECT status, COUNT(*) as total_books
2 FROM books BY status
```

**Result Grid 2:**

name	phone	title
John Doe	987633210	1984
Bob Johns	763432109	The Alchemist
